

ANTHONY NNANNA

Senior Fullstack Software Developer

anthonymnannac@gmail.com | [Github](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Results-driven Senior Full Stack Developer with 7+ years of experience designing, building, and scaling web applications using Laravel, Vue.js, PHP, Tailwind and modern front-end technologies. Proven track record of delivering performant, maintainable solutions across RESTful API design, relational database architecture, and responsive UI development. Comfortable owning full delivery cycles from technical discovery and architecture through to deployment and monitoring. Strong collaborator in Agile environments with a passion for clean code, developer experience, and continuous improvement.

TECHNICAL SKILLS

Backend: PHP 8.x, Laravel, RESTful API Design, OAuth2, JWT, Sanctum, Artisan CLI, Echo.

Frontend: Vue.js 3, React, Inertia.js, Tailwind CSS, HTML5, CSS3, JavaScript, TypeScript, Vite.

Database: MySQL, PostgreSQL, SQLite, Query Optimisation, Redis (caching & queues).

API & Integration: REST, JSON:API, Webhook design, Third-party integrations (Stripe, Firebase, Google Maps).

DevOps: AWS, Git, GitHub, GitLab, Docker, CI/CD, GitHub Actions, Linux CLI, Nginx, Apache, Forge, Envoyer.

Testing: PHPUnit, Pest, Laravel Dusk, Vue Test Utils, Postman, Thunder Client, Insomnia.

Practices: Agile, TDD, SOLID principles, DRY, Design Patterns (Repository, Service Layer), Code Review.

PROFESSIONAL EXPERIENCE

Senior Web Developer · Jars Of Glory NGO

August 2023 - Present – Florida, USA

An NGO based in West Melbourne FL, that organizes charity events mainly in Florida and occasionally in other states in the USA.

- Designed and developed the organization's website from the ground up using a headless WordPress architecture with a Vue.js/TypeScript front end, establishing the NGO's primary digital presence.
- Built a custom donation/payment integration enabling supporters to contribute directly through the site, streamlining the fundraising process for charity events across Florida and other states.
- Developed an event registration and booking system allowing attendees to sign up for charity events online, reducing manual coordination for the events team.
- Implemented on-page SEO and performance optimizations (page speed, semantic structure, meta tagging), improving the site's visibility and load times.
- Maintain the website on an ongoing contract basis, handling feature updates, content changes, bug fixes, and technical improvements as the organization's needs evolve.

Senior Full Stack Developer · Sourcedware

July 2023 - May 2026 – Remote

A software development agency (sister company to Gigabyte Developers, under shared ownership) that builds and manages full-stack websites and web applications for businesses and startups.

- Built full-stack web applications from scratch for multiple client companies using Laravel, Vue.js, Nuxt.js, TypeScript and PHP, taking projects from architecture through deployment.

- Maintained and extended existing client codebases, implementing new features, resolving bugs, and improving performance across a portfolio of live production sites.
- Participated in feature-planning meetings directly with company owners and clients, translating business requirements into technical specifications and implementation plans.
- Managed deployment and server infrastructure for client projects using Laravel Forge and VPS environments, and set up CI/CD pipelines with GitHub Actions to automate testing and streamline release workflows.
- Worked across multiple concurrent client projects, adapting to varied codebases, tech stacks, and project conventions while maintaining consistent code quality.

Junior / Mid Full Stack Developer · Gigabyte Developers

September 2019 - June 2023 – Remote

A software development agency (sister company to Sourcedware, under shared ownership) building custom applications and websites for clients and startups.

- Progressed from Intern through Junior to Mid-Level Developer over four years, taking on increasing ownership of client projects and technical responsibilities.
- Built and maintained websites and web applications for client businesses, contributing to front-end and back-end development across multiple projects.
- Collaborated with senior developers and project leads to learn and apply industry-standard development practices, version control workflows, and code review processes.
- Developed a strong foundation in PHP, Laravel, Vue, React, Tailwind, TypeScript, JavaScript and HTML/CSS that directly prepared for the transition to a senior role at Sourcedware.

NOTABLE PROJECTS

Limit-Order Exchange Engine – [\[Github Repo Link\]](#)

Tech stack: *Laravel, Laravel API, Vue 3*

(Composition API), Tailwind CSS, MySQL, Laravel Broadcasting, Pusher

- Built a real-time trading engine simulating a cryptocurrency limit-order exchange under a 48-hour technical assessment.
- Implemented atomic balance and asset-locking logic to prevent race conditions on concurrent order placement.
- Developed a price-matching engine enforcing full-match rules between buy and sell orders, with automatic 1.5% commission calculation on every executed trade.
- Integrated Pusher via Laravel Broadcasting to push live order-match events to private user channels, updating balances, assets, and order statuses without a page refresh.
- Delivered a financially-accurate, concurrency-safe matching engine with live real-time updates, completed and submitted within the assessment deadline.

TruvoTrade – [\[Github Repo Link\]](#)

Tech stack: *Laravel, Blade, Tailwind, MySQL*

- Built a hedge fund platform's website from scratch using Laravel's MVC architecture with Blade templating for server-rendered views.
- Implemented core pages, routing, and backend logic to support the platform's business operations.

EDUCATION

B.Sc. Computer Science · Federal University of Technology Owerri

2017 - 2022

ADDITIONAL INFORMATION

Languages: English (fluent), Spanish (conversational).
